Achieving your goals

MINING INDUSTRY

To ensure profitability and future growth, the Australian and New Zealand mining industry must maintain best in class operational performance and disciplined cost control. Executives in the mining industry are fully aware of how market demand for their products strongly fluctuates. In the face of fluctuating demand and cyclical pricing, operating an efficient and streamlined business, as well as squeezing costs, is critical. Leverage has many years of experience in providing 'best in class' business software and applications for the mining, engineering and construction industries.

Helping organisations to reduce costs and operate at peak performance, Our software solution allows you:

- To analyse and manage costs at the shaft, process, sub-process, and equipment levels,
- Better manage and service capital equipment (the more efficient use you gain out of a piece of equipment the lower your costs will be).
- To capture production and exploration data with configurable time periods and units of measure to produce cost-per-ounce and cost-per-meter reporting.
- Manage all of your financial and accounting requirements across the world.

PROJECTS

If you manage large investments in complex projects, with multiple organizations, dispersed teams and critical timelines. Effective collaboration is essential and good information management is the key. It can help address some of the challenges faced by asset owners, engineers, project managers and other project participants.

SERVICING THE MINING INDUSTRY

JOBGING

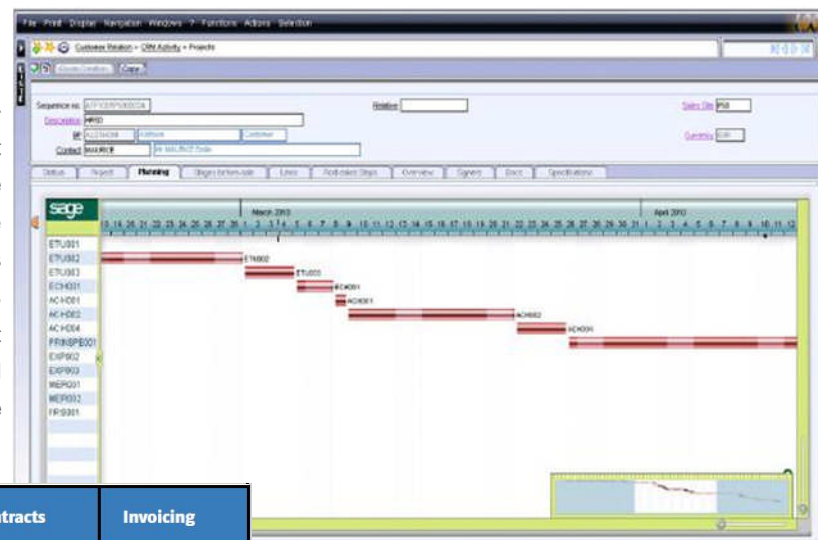

Prepare estimates and quotations, track labour, materials, purchases and resource usage against jobs, projects and contracts. Project managers are provided with real time detailed cost information to monitor project performance.

With powerful reporting and alerts management, this award winning application is a must for any business of a service management or project nature.

Providing single integrated solutions to manage your business....

SERVICE MANAGEMENT

Does your business need an end-to-end service management solution? Field Service management takes the intuitive time and expense capture features of Web Timesheet Entry and adds job and activity management functionality, delivering a powerful end-to-end field service management solution.

Job Management

At a glance, field service staff can view all key details of a job, including customer and site details, fault description, items at fault and the scheduled time and date for repair – all whilst away from the office.

Track Inventory Issues and Swap-Outs

Parts can often be forgotten or misplaced

during field service activities involving repairs, swap-outs or warranty replacements. Field Service Pro manages inventory movements between your vehicle, or warehouse, and the customer's site. It goes on to record all parts received back for warranty and RMA processing.

Activity Management

Activities can be easily created and assigned to field service staff by users back at base. These activities are instantly available for action by staff waiting in the field.
